EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

Comment on Submissions

1. This communication is responsive to submissions 28 September 2005.

Allowable Subject Matter

2. Claims 6-19 are allowed.
3. The following is an examiner's statement of reasons for allowance:

Regarding independent claim 6, the prior art does not disclose or fairly suggest a laser scanning microscope comprising a wavelength selection device disposed between the first light branch device and the photodetector to transmit a desired observation light and to limit transmission of the second laser light.

The examiner notes that while it is known in the art for a laser scanning microscope capable of selecting wavelength composition of light admitted to the detector. Suitable emission spectral filters may include: interference filters, liquid crystal tunable filters, acousto-optic tunable filters, gratings, monochromators, and/or prisms, among others. One or more filters having suitable spectral characteristics (e.g., cutoff wavelength) may be housed in a filter selector such as a filter wheel or filter slider so that the wavelength composition of the emission light admitted to the detector may be changed by rotating or sliding or otherwise placing a preselected filter into the optical path (see for example Jackson III et al – US 2002/0109100 A1 – [0051]), the prior art does not fairly suggest the apparatus comprising a wavelength selection device disposed between the first light branch device and the photodetector to transmit a desired observation light and to limit transmission of the second laser light.

The remaining claims 7-19 are allowable based on their dependency.
